Key statistics

In seasonally adjusted terms for the December quarter 2025:

- total jobs increased 0.3% to 16.4 million
- filled jobs increased 0.4% to 16.1 million
- secondary jobs increased 0.4% to 1.1 million
- proportion of vacant jobs remained at 2.0%
- multiple job-holders increased 0.4% to 976,400
- hours worked increased 0.7% to 6.1 billion hours.

Key statistics - Seasonally adjusted

	Dec-25	Quarterly change (%)	Annual change (%)
Jobs			
Total jobs	16,434,700	0.3%	1.2%
Filled jobs	16,108,200	0.4%	1.3%
Job vacancies	326,500	-1.5%	-5.0%
Main jobs	15,015,000	0.4%	1.5%
Secondary jobs	1,093,200	0.4%	-1.0%
Proportion of vacant jobs	2.0%	na	na
People			
Employed people	15,026,400	0.7%	1.5%
Multiple job holders	976,400	0.4%	-1.0%
Multiple job holding rate	6.5%	na	na
Hours			
Hours actually worked	6,053.8 million	0.7%	1.5%
Payments			
Average income per employed person	\$25,648.10	0.4%	5.1%

Key statistics - Trend

	Dec-25	Quarterly change (%)	Annual change (%)
Jobs			
Total jobs	16,423,600	0.4%	1.2%
Filled jobs	16,094,700	0.5%	1.3%
Job vacancies	328,900	-0.8%	-2.7%
Main jobs	15,010,300	0.4%	1.4%
Secondary jobs	1,084,400	1.2%	-0.1%
Proportion of vacant jobs	2.0%	na	na
People			
Employed people	15,007,300	0.4%	1.4%
Multiple job holders	975,300	1.0%	0.1%
Multiple job holding rate	6.5%	na	na
Hours			
Hours actually worked	6,041.7 million	0.4%	1.3%
Payments			
Average income per employed person	\$25,688.00	0.9%	5.0%

In June 2025 the ABS released preliminary estimates of [Labour Account data modelled by sex and age \(https://www.abs.gov.au/statistics/detailed-methodology-information/information-papers/update-measuring-unpaid-care-and-modelling-sex-and-age-labour-account\)](https://www.abs.gov.au/statistics/detailed-methodology-information/information-papers/update-measuring-unpaid-care-and-modelling-sex-and-age-labour-account).

From the December 2025 quarter onwards, an update to the quarterly Labour Account publication will be released a week later with additional sex and age group estimates. Multiple job-holders will also be released on the same day.

Factors affecting interpretation

Revisions this quarter

Data in the four quadrants of the Labour Account have been revised from the previously published estimates.

Revisions may be attributable to a range of factors, these include:

- revisions to Net Overseas Migration data

- revisions to data from the quarterly Australian National Accounts
- revisions to the Labour Force Survey data, including estimates of employment and hours worked.

The latest industry benchmark data in the Labour Account is for the 2023-24 financial year. Estimates from September quarter 2024 onwards are subject to revisions as indicator data is progressively replaced with more definitive benchmark information.

Revisions to published estimates are shown in Table 22 in the Data downloads section.

Further information on revisions in the Labour Account can be found in [Labour Statistics: Concepts, Sources and Methods \(/statistics/detailed-methodology-information/concepts-sources-methods/labour-statistics-concepts-sources-and-methods/2023/methods-four-pillars-labour-statistics/australian-labour-account#revisions-in-the-australian-labour-account\)](#).

Stock and flow estimates

The Labour Account includes a combination of stock and flow time series estimates. A stock series is a measure of certain attributes at a point in time. A flow series is a measure of activity over a given period.

The Jobs and People quadrants contain stock time series estimates measuring change from the end of the proceeding quarter to the end of the current quarter. The Hours and Payments quadrants include flow time series estimates and measure all activity across the reference quarter.

For more information, please see [Time series data \(/statistics/understanding-statistics/statistical-terms-and-concepts/time-series-data\)](#).

Guide to labour statistics

The Labour Account is the best source of quarterly industry and sector data. To learn more about our different labour measures, their purpose and how to use them, see our [Guide to labour statistics \(/statistics/understanding-statistics/guide-labour-statistics#data-impacts-and-changes\)](#). It provides summary information on labour market topics including [Industry employment guide \(/statistics/understanding-statistics/guide-labour-statistics/industry-employment-guide#data-impacts-and-changes\)](#) data.

Jobs

In seasonally adjusted terms for the December quarter 2025:

- filled jobs increased by 0.4%, following a 0.7% rise in the September quarter 2025. Filled jobs grew by 1.3% through the year
- the number of main jobs increased by 56,400 (or 0.4%)
- the proportion of vacant jobs decreased to 2.0%
- the number of public sector jobs increased by 0.3%, while the number of private sector jobs increased by 0.5%.

Total jobs

In seasonally adjusted terms for the December quarter 2025, the total number of jobs increased by 55,600 (or 0.3%). This consisted of a decrease of 5,100 job vacancies and an increase of 60,700 filled jobs.

Total jobs, by industry, seasonally adjusted

Filled jobs

In seasonally adjusted terms for the December quarter 2025, the number of filled jobs increased by 60,700 to 16.1 million.

Filled jobs, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

Filled jobs, by industry, December quarter 2025, seasonally adjusted

	Filled jobs ('000)	Quarterly change (%)	Annual change (%)
Agriculture, forestry and fishing (A)	437.6	0.0	-1.0
Mining (B)	230.2	0.8	-0.2
Manufacturing (C)	904.2	-0.5	-3.2
Electricity, gas, water and waste services (D)	149.1	1.2	4.6
Construction (E)	1,327.5	0.9	4.5
Wholesale trade (F)	580.0	-0.2	-2.3
Retail trade (G)	1,518.6	-0.3	-0.7
Accommodation and food services (H)	1,308.9	0.7	3.5
Transport, postal and warehousing (I)	718.3	0.6	2.1
Information media and telecommunications (J)	206.0	0.7	2.6
Financial and insurance services (K)	518.9	-0.6	1.5
Rental, hiring and real estate services (L)	302.6	2.4	0.1
Professional, scientific and technical services (M)	1,312.8	0.7	2.2
Administrative and support services (N)	954.5	0.0	1.4
Public administration and safety (O)	892.8	0.6	2.6
Education and training (P)	1,323.3	0.5	1.8
Health care and social assistance (Q)	2,558.3	0.3	1.0
Arts and recreation services (R)	294.2	1.2	3.3
Other services (S)	570.3	0.6	1.2
Total all industries	16,108.2	0.4	1.3

Main and secondary jobs

In seasonally adjusted terms for the December quarter 2025:

- main jobs increased by 56,400 (or 0.4%)
- secondary jobs increased by 4,300 (or 0.4%)
- the proportion of secondary jobs to filled jobs remained at 6.8%.

The three industries with the highest number of secondary jobs were Health care and social assistance, Administrative and support services, and Education and training.

Main and secondary jobs, by industry, seasonally adjusted

Secondary jobs can be held by people who have their main job in the same or a different industry.

Statistical discrepancy - Filled jobs

The Labour Account compiles independent estimates of the number of filled jobs from both a household and business perspective. The difference between these two estimates is referred to as the "statistical discrepancy". The household estimates of filled jobs are considered the best measure of labour market activity at the total economy level, while business sources are considered more reliable estimating the distribution of jobs across industries. As a result, the Labour Account filled jobs estimates are constrained (equivalent) to the household side.

The discrepancy between the two sources is reduced to zero through the balancing processes of the Labour Account, producing a single harmonised or "balanced" number of filled jobs. The balanced estimate of filled jobs incorporates the advantage of the industry distribution derived from business side data, whilst constraining to a total economy estimate sourced from household side data. In original terms the discrepancy between household sources and business sources was 434,400 jobs in the December quarter 2025, or 2.7% of the household estimate.

Filled jobs discrepancy, original

Balancing decisions for Rental, hiring and real estate services and Other services were mostly based on household survey sources. All other industries were mostly based on business survey sources.

People

In seasonally adjusted terms for the December quarter 2025:

- the total number of employed people increased by 0.7% to 15.0 million
- the number of multiple job holders increased by 0.4%
- unemployed people decreased by 35,500 people to 630,900.

Employed people and multiple job-holders, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest number of employed people in the December quarter 2025 were Health care and social assistance, Retail trade, and Construction.

Employed people, by industry, seasonally adjusted

Hours

In seasonally adjusted terms for the December quarter 2025, the total number of hours actually worked increased by 45 million hours (or 0.7%) to 6.1 billion hours.

Hours actually worked, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest number of hours actually worked in the December quarter 2025 were Health care and social assistance, Construction, and Professional, scientific and technical services.

Hours actually worked, by industry, seasonally adjusted

Quarterly hours worked per job, by industry, seasonally adjusted

Payments

The Labour Account Payments quadrant presents the costs incurred by enterprises in employing labour, and the income received by people from its provision. Total income consists of compensation of employees and labour income from self-employment. The addition of other related costs to employers to total income will derive total labour costs.

In seasonally adjusted terms for the December quarter 2025:

- total labour income increased by \$4,161 million (or 1.1%) to \$385,398 million
- the average labour income per employed person increased by 0.4% to \$25,648
- total compensation of employees increased by 1.1% to \$355,724 million
- labour income from self-employment increased by 1.0% to \$29,674 million
- total labour costs increased by \$4,454 million (or 1.1%) to \$410,386 million.

Total labour income, seasonally adjusted and trend (a)

a. Larger than usual quarter-to-quarter changes occurred during the COVID-19 pandemic. The ABS recommends caution when using trend estimates published in spreadsheets in this release for this period.

The three industries with the highest total labour income in the December quarter 2025 were Health care and social assistance, Professional, scientific and technical services, and Construction.

Total labour income, by industry, seasonally adjusted
